

Science Curriculum Map - Year 3

Year 3	Main Objectives of Unit:	Key Learning:	Working Scientifically Skill Focus:	By the end of this topic, the children will know this vocabulary:
Autumn 1 Autumn 2	<p><b><u>Animals Including Humans – Health and Movement:</u></b></p> <ul style="list-style-type: none"> <li>Identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food – they get nutrition from what they eat.</li> <li>Identify that humans and some other animals have skeletons and muscles for support, protection and movement.</li> </ul>	<p><b><u>Animals Including Humans – Health and Movement:</u></b></p> <ul style="list-style-type: none"> <li>Animals, unlike plants which can make their own food, need to eat in order to get the nutrients they need. Food contains a range of different nutrients – carbohydrates (including sugars), protein, vitamins, minerals, fats, sugars, water – and fibre that are needed by the body to stay healthy. A piece of food will often provide a range of nutrients.</li> <li>Humans, and some other animals, have skeletons and muscles which help them move and provide protection and support.</li> </ul>	<p><b><u>Animals Including Humans – Health and Movement:</u></b></p> <ul style="list-style-type: none"> <li>Ask relevant questions and use different types of scientific enquiries to answer them.</li> </ul>	<p><b><u>Animals Including Humans – Health and Movement:</u></b></p> <p>Nutrition, nutrients, carbohydrates, sugars, protein, vitamins, minerals, fibre, fat, water, skeleton, bones, muscles, support, protect, move, skull, ribs, spine, muscles, joints</p>
Spring 1	<p><b><u>Rocks – Rocks, Fossils and Soils:</u></b></p> <ul style="list-style-type: none"> <li>Compare and group together different kinds of rocks on the</li> </ul>	<p><b><u>Rocks – Rocks, Fossils and Soils:</u></b></p> <ul style="list-style-type: none"> <li>Rock is a naturally occurring material. There are different types of rock e.g. sandstone,</li> </ul>	<p><b><u>Rocks – Rocks, Fossils and Soils:</u></b></p> <ul style="list-style-type: none"> <li>Reporting on findings from enquiries, including oral and written explanations, displays or</li> </ul>	<p><b><u>Rocks – Rocks, Fossils and Soils:</u></b></p> <p>Rock, stone, pebble, boulder, grain, crystals, layers, hard, soft, texture, absorb water,</p>

	<p>basis of their appearance and simple physical properties.</p> <ul style="list-style-type: none"> <li>Describe in simple terms how fossils are formed when things that have lived are trapped within rock.</li> <li>Recognise that soils are made from rocks and organic matter.</li> </ul>	<p>limestone, slate etc. which have different properties. Rocks can be hard or soft. They have different sizes of grain or crystal. They may absorb water. Rocks can be different shapes and sizes (stones, pebbles, boulders). Soils are made up of pieces of ground down rock which may be mixed with plant and animal material (organic matter). The type of rock, size of rock pieces and the amount of organic matter affect the property of the soil.</p> <ul style="list-style-type: none"> <li>Some rocks contain fossils. Fossils were formed millions of years ago. When plants and animals died, they fell to the seabed. They became covered and squashed by other material. Over time the dissolving animal and plant matter is replaced by minerals from the water.</li> </ul>	<p>presentations of results and conclusions.</p>	<p>soil, fossil, marble, chalk, granite, sandstone, slate, soil, peat, sandy/chalk/clay soil</p>
<p>Spring 2</p>	<p><b><u>Forces and Magnets:</u></b></p> <ul style="list-style-type: none"> <li>Compare how things move on</li> </ul>	<p><b><u>Forces and Magnets:</u></b></p> <ul style="list-style-type: none"> <li>A force is a push or a pull. When an object moves</li> </ul>	<p><b><u>Forces and Magnets:</u></b></p> <ul style="list-style-type: none"> <li>Set up simple practical enquiries, comparative</li> </ul>	<p><b><u>Forces and Magnets:</u></b></p> <p>Force, push, pull, twist, contact force, non-contact</p>

	<p>different surfaces.</p> <ul style="list-style-type: none"> <li>• Notice that some forces need contact between two objects, but magnetic forces can act at a distance.</li> <li>• Observe how magnets attract or repel each other and attract some materials and not others.</li> <li>• Compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials.</li> <li>• Describe magnets as having two poles.</li> <li>• Predict whether two magnets will attract or repel each other, depending on which poles are facing.</li> </ul>	<p>on a surface, the texture of the surface and the object affect how it moves. It may help the object to move better or it may hinder its movement e.g. ice skater compared to walking on ice in normal shoes.</p> <ul style="list-style-type: none"> <li>• A magnet attracts magnetic material. Iron and nickel and other materials containing these, e.g. stainless steel, are magnetic. The strongest parts of a magnet are the poles. Magnets have two poles – a north pole and a south pole. If two like poles, e.g. two north poles, are brought together they will push away from each other – repel. If two unlike poles, e.g. a north and south, are brought together they will pull together – attract.</li> <li>• For some forces to act,</li> </ul>	<p>and fair tests.</p> <ul style="list-style-type: none"> <li>• Using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions.</li> <li>• Gathering, recording, classifying and presenting data in a variety of ways (Table or bar chart) to help in answering questions.</li> </ul>	<p>force, magnetic force, magnet, strength, bar magnet, ring magnet, button magnet, horseshoe magnet, attract, repel, magnetic material, metal, iron, steel, poles, north pole, south pole</p>
--	--	--	--	--

		<p>there must be contact e.g. a hand opening a door, the wind pushing the trees. Some forces can act at a distance e.g. magnetism. The magnet does not need to touch the object that it attracts.</p>		
<p>Summer 1</p>	<p><b><u>Light – Light and Shadow:</u></b></p> <ul style="list-style-type: none"> <li>• Recognise that they need light in order to see things, and that dark is the absence of light.</li> <li>• Notice that light is reflected from surfaces.</li> <li>• Recognise that light from the sun can be dangerous and that there are ways to protect their eyes.</li> <li>• Recognise that shadows are formed when the light from a light source is blocked by an opaque object.</li> <li>• Find patterns in the way that the size of shadows change.</li> </ul>	<p><b><u>Light – Light and Shadow:</u></b></p> <ul style="list-style-type: none"> <li>• We see objects because our eyes can sense light. Dark is the absence of light. We cannot see anything in complete darkness. Some objects, for example, the sun, light bulbs and candles are sources of light. Objects are easier to see if there is more light. Some surfaces reflect light. Objects are easier to see when there is less light if they are reflective.</li> <li>• The light from the sun can damage our eyes and therefore we should not look directly at the sun and can protect our eyes by wearing sunglasses or sunhats in bright light.</li> <li>• Shadows are formed on a</li> </ul>	<p><b><u>Light – Light and Shadow:</u></b></p> <ul style="list-style-type: none"> <li>• Gathering, recording, classifying and presenting data in a variety of ways to help in answering questions.</li> </ul>	<p><b><u>Light – Light and Shadow:</u></b> Light, light source, dark, absence of light, transparent, translucent, opaque, shiny, matt, surface, shadow, reflect, mirror, sunlight, dangerous</p>

		<p>surface when an opaque or translucent object is between a light source and the surface and blocks some of the light. The size of the shadow depends on the position of the source, object and surface.</p>		
<p>Summer 2</p>	<p><b><u>Plants – How Plants Grow:</u></b></p> <ul style="list-style-type: none"> <li>Identify and describe the functions of different parts of flowering plants: roots; stem/trunk; leaves; and flowers.</li> <li>Explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant.</li> <li>Investigate the way in which water is transported within plants.</li> <li>Explore the part that flowers play in the life cycle of flowering plants, including pollination, seed</li> </ul>	<p><b><u>Plants – How Plants Grow:</u></b></p> <p>Many plants, but not all, have roots, stems/trunks, leaves and flowers/blossom. The roots absorb water and nutrients from the soil and anchor the plant in place. The stem transports water and nutrients/minerals around the plant and holds the leaves and flowers up in the air to enhance photosynthesis, pollination and seed dispersal. The leaves use sunlight and water to produce the plant’s food. Some plants produce flowers which enable the plant to reproduce. Pollen, which is produced by the male part of the flower, is transferred to the female part of other flowers (pollination). This forms seeds, sometimes contained in berries or fruits which are then dispersed in different ways. Different plants require different conditions for</p>	<p><b><u>Plants – How Plants Grow:</u></b></p> <ul style="list-style-type: none"> <li>Making systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers.</li> <li>Using straightforward scientific evidence to answer questions or to support their findings.</li> </ul>	<p><b><u>Plants – How Plants Grow:</u></b></p> <p>Photosynthesis, pollen, insect/wind pollination, seed formation, seed dispersal, wind dispersal, animal dispersal, water dispersal.</p>

	formation and seed dispersal.	germination and growth.
